syngenta[®]

NEW ORONDIS[®] Vip – a breakthrough fungicide delivering unparalleled downy mildew control in brassica, allium and salad crops.

Star Technology

Oxathiapiprolin + Metalaxyl-M provide superior control through dual-action protection.

Red-Carpet Coverage

Systemic protection shields emerging growth and established leaves.

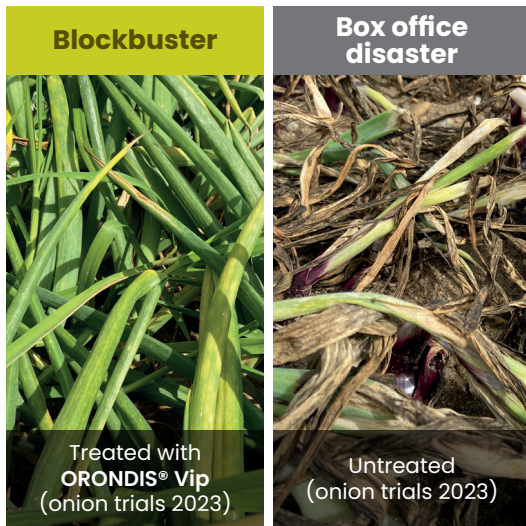

Premium Performance

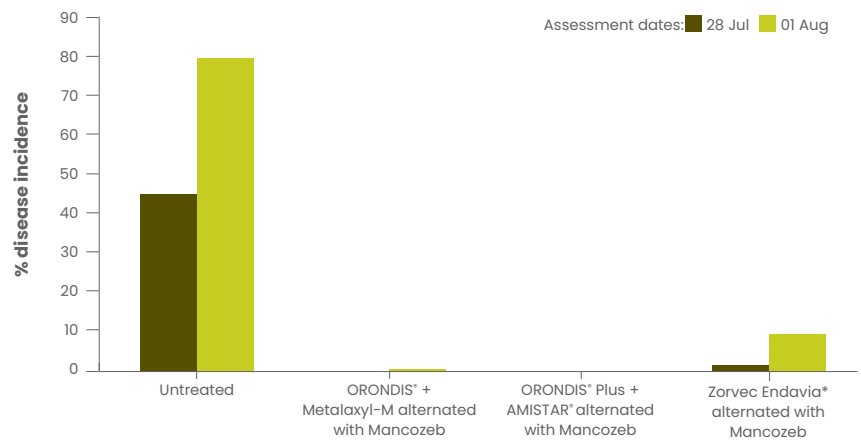

Award-winning harvests meeting high quality standards and yields.

Independent trials demonstrate the superior efficacy of ORONDIS® Vip

Onion downy mildew % incidence, Suffolk

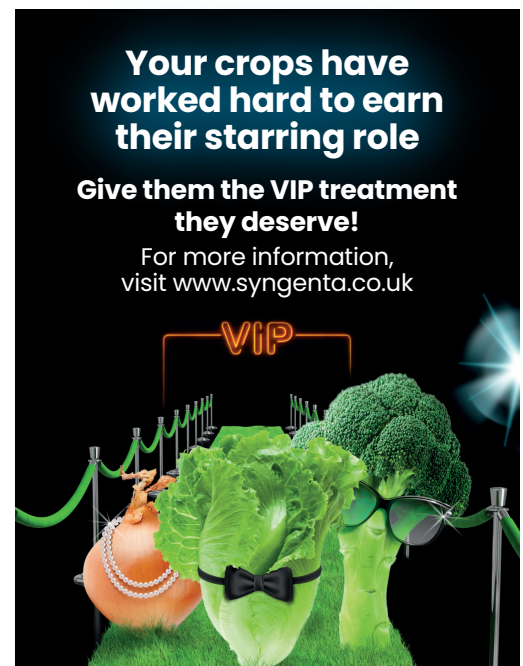

* Zorvec Endavia is a trademark of Corteva Agriscience

Crop	Maximum individual rate (L/ha)	Maximum no. applications	Minimum spray interval (days)	Latest time of application (days)
Brassica (broccoli, Brussels sprouts, cabbage, cauliflower)	0.5	2	10	20
Allium (bulb onion, salad onion, leek, garlic)	0.5	2	7-14**	14
Salad & Herbs (lettuce, baby leaf, endive, rocket, spinach)	0.5	2*	7	10

* Only 2 applications per year in the same field. **Refer to label.

Quality-focused growers choose ORONDIS® Vip because:

Exceptional Potency	Very low use rates deliver superior control – exceptional potency requires minimal application
Rapid Protection	Within 24 hours, 60% locks into the wax layer and leaf tissues, protecting the plant
Weather Resilience	Consistent protection even in challenging conditions
Proactive Defence	Works before disease spreads, as disease spores are spread by wind and rain
Crop Versatility	One solution works effectively across brassicas, alliums, spinach, lettuce, and herbs
Yield Security	Powerful oomycete control securing high yields
Market Advantage	Ensures consistent, premium-quality produce that meets demanding market standards
