

# RAIN, SEPTORIA, RUST AND RISK. ARE YOUR CROPS PROTECTED?

Widespread heavy showers earlier this month across the UK spread Septoria spores to upper leaves, while cool conditions kept the virulent YR15 Yellow Rust strain ever-present in many crops. The recent hot spell will hasten Septoria symptoms, and with the forecast turning cooler and wetter, YR15 Yellow Rust threat continues.

Where forecasted rain coincides with flowering of wheat crops the risk of Fusarium infection is elevated. With T2 product decisions made, farmers who chose to cut back on inputs may be wondering if their yields are now sufficiently protected from renewed disease threats as we move towards T3.

## REACH FOR MIRAVIS® PLUS OR ELATUS® ERA.

**£ FOR £ SPEND, MIRAVIS® AND ELATUS® ERA DELIVER THE HIGHEST RETURN ON THEIR SPECIALIST DISEASES.**

Contact your local Syngenta representative to discuss MIRAVIS® Plus and Elatus® ERA spray rates.
