Robust Disease & Agronomics

Height (cm): 80
Lodging no PGR
(1-9): 7
Lodging with PGR
(1-9): 8

Nitrogen Advice:

A standard nitrogen input programme for a feed variety should be applied, typically 180 kg N/ha

REFLECTION AT A GLANCE

- High yielding hard group 4 feed wheat
- Early maturity
- OWBM resistance
- High specific weight and HFN
- Short, stiff straw for excellent harvestability

REFLECTION GIVES EXCELLENT ON-FARM RESULTS

“I’ve been growing **REFLECTION** since it was first recommended in 2015 and I’ve been impressed with it ever since. When **REFLECTION** broke down to Yellow Rust I kept on top of it and still managed to get some of my highest yields ever. Now that I know Yellow Rust is something to watch out for I can manage the variety accordingly – it’s not a concern for me. On top of its yield, **REFLECTION**’s straw and maturity made it an excellent variety to harvest. The scores for this variety just don’t do it justice on farm!”

Bill Barr, Hertfordshire
