

Potato Science Live showcase for agronomy and technology

Agronomy Issues
16.01.2019

This season's extended series of Syngenta Potato Science Live events are set to give growers and agronomists an exciting insight into some of the future technologies designed to enhance the efficiency and profitability of potato crop production.

The format of these popular events provides a chance to quiz specialists in new industry agronomy and technology, covering a range of topics from planting through to harvest and storage.

Syngenta POTATO SCIENCE

Syngenta Potato Technical Manager, Michael Tait, believes the adoption of new technologies and science discoveries could provide significant advances in the way crops are grown in the future.

“Last season posed some significant challenges for growers - from the late start to planting, through periods of intense heat and moisture stress, with variable yields at harvest,” he reported.

“There are new innovations in blight monitoring, spray application and desiccation management that can help focus on reducing that variability and producing consistent high yields of quality tubers.”

With a range of speakers and specialists from across the industry, Potato Science Live will provide a first look at a range of new agronomy opportunities, along with some ideas and practical measures that can be readily implemented this season.

The nationwide events will be held at:

Meeting Date	Meeting Time	Venue
<u>Weds 6th Feb 2019</u>	<u>09:15 - 13:00</u>	<u>Cider Museum, Pomona Place, Hereford, HR4 0EF</u>
<u>Thurs 7th Feb 2019</u>	<u>09:30 - 14:00</u>	<u>Frogmary Green Farm, South Petherton, Somerset, TA13 5TJ</u>
<u>Tues 12th Feb 2019</u>	<u>09:15 - 13:00</u>	<u>The Golden Lion Hotel, Main Street, Easenhall, Rugby, CV23 0JA</u>
<u>Tues 12th Feb 2019</u>	<u>09:00 - 13:00</u>	<u>Timbers Country Lodge, Fincham, PE33 9HE</u>
