

## VIXERAN COMPATIBILITY LIST

The following list of products have been **biologically** tested with VIXERAN at the dose rates and water volumes shown below. These products are both physically and biologically compatible. Syngenta UK Ltd will only support a 2-way mix with the products as listed. For further information on compatibilities, contact Syngenta UK Ltd on 0800 169 6058.

The compatible concentration of mix partner to water volume is very important in a tank mix with a living biological product such as Vixeran. Example compatible use rates and water volumes are shown below. If other use rates are required, use the formula below to work out the required minimum water volume.

To work out the minimum water volume of a particular mix, use the calculation:  
 “**Mix Partner dose rate**” ÷ “**Compatible concentration**” × 100 = “**minimum water volume**”

For example, if using ELATUS ERA at 1.0 l/ha, minimum water volume would be:-  
 $1.0 \div 0.75 \times 100 = \text{minimum water vol. of } 133 \text{ l/ha}$
