# Shabras

Cassius x Hereford

**Maturity 0**

**A very high yielding variety with full UK Recommendation**

## Grain Quality

Specific weight:  
76 kg

Hagberg Falling  
Number: 211

Protein content:  
11.5%

## Recommended Seed Rate:

September:  
275-325 seeds/m<sup>2</sup>

October:  
325-375 seeds/m<sup>2</sup>

## High yields throughout UK

UK	E	W	N
101	101	101	104

## Robust Disease & Agronomics

Height (cm): 85

Lodging no PGR  
(1-9): 6

Lodging with PGR  
(1-9): 7

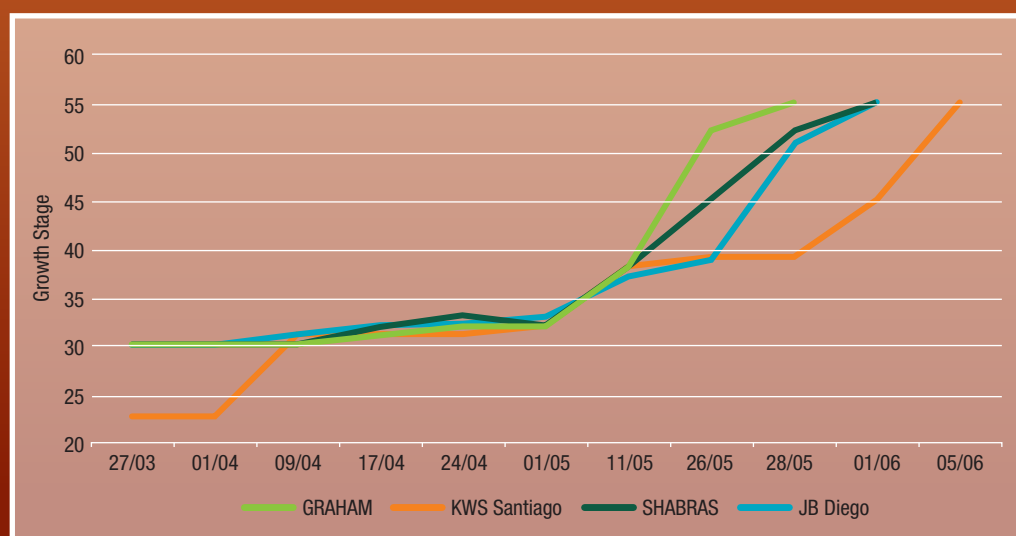

## Nitrogen Advice:

A standard nitrogen input programme for a feed variety should be applied, typically 180 kg N/ha

## SHABRAS AT A GLANCE

- High yielding hard group 4 feed wheat
- Strong, consistent *Septoria tritici* resistance of 6.1
- Strong yields on both light and heavy soil types
- Excellent performance as a second wheat

## EXCELLENT PERFORMANCE AS A SECOND CEREAL AND ON A RANGE OF SOIL TYPES

**SHABRAS** has quick spring re-growth and will be early to reach GS30, from there it develops through its growth stages at an even pace and will reach major fungicide timings at similar times to JB Diego

▪ We would recommend a drilling date between mid-September and end of October

▪ **SHABRAS** demonstrates flexibility in rotational positions
