PRIORI XTRA is a suspension concentrate containing 200 g/l azoxystrobin and 80 g/l cyproconazole.

A broad-spectrum fungicide for wheat, barley, rye, oats, oilseed rape, sugar beet and fodder beet.

The (COSHH) Control of Substances Hazardous to Health Regulations may apply to the use of this product at work.

SAFETY PRECAUTIONS

(a) Operator protection
Engineering controls of operator exposure must be used where reasonably practicable in addition to the following personal protective equipment:
WEAR SUITABLE PROTECTIVE GLOVES when handling the concentrate.
However, engineering controls may replace personal protective equipment if a COSHH assessment shows they provide an equal or higher standard of protection.
WASH SPLASHES from skin and eyes immediately.
DO NOT BREATHE SPRAY.
WASH HANDS AND EXPOSED SKIN before meals and after work.
IF YOU FEEL UNWELL, seek medical advice (show label where possible)

(b) Environmental protection
Do not contaminate water with the product or its container. Do not clean application equipment near surface water. Avoid contamination via drains from farmyards and roads.

(c) Storage and disposal
KEEP IN ORIGINAL CONTAINER, tightly closed in a safe place.
RINSE CONTAINER THOROUGHLY by using an integrated pressure rinsing devise or manually rinsing three times. Add washings to sprayer at time of filling and dispose of safely.
DO NOT RE-USE CONTAINER FOR ANY PURPOSE.

This product label is compliant with the Crop Protection Association Voluntary Initiative (VI) guidance.
PRIORI XTRA
A suspension concentrate containing 200 g/l azoxystrobin and 80 g/l cyproconazole

Signal word: Warning

Hazard Statements:
- Harmful if swallowed.
- Harmful if inhaled.
- Suspected of damaging the unborn child.
- Very toxic to aquatic life with long lasting effects.

Precautions Statements:
- Keep out of reach of children.
- Avoid breathing dust/fume/gas/mist/vapours/spray.
- Do not eat, drink or smoke when using this product.
- Avoid release to the environment.
- If exposed or concerned: Get medical advice/attention.
- Call a POISON CENTRE or doctor/physician if you feel unwell.
- Collect spillage.
- Dispose of contents/container to a licensed hazardous-waste disposal contractor or collection site except for empty clean containers which can be disposed of as non-hazardous waste.

Supplemental Information:
To avoid risks to human health and the environment, comply with the instructions for use.

IMPORTANT INFORMATION
FOR USE ONLY AS AN AGRICULTURAL FUNGICIDE
Crop: Winter and spring crops of wheat, barley, rye, oats, oilseed rape, sugar beet and fodder beet.
Maximum individual dose, Maximum total dose, Latest time of application & Other specific restrictions: Full details are given in Important Information on attached leaflet.

READ THE LABEL BEFORE USE. USING THIS PRODUCT IN A MANNER THAT IS INCONSISTENT WITH THE LABEL MAY BE AN OFFENCE. FOLLOW THE CODE OF PRACTICE FOR USING PLANT PROTECTION PRODUCTS

<td>0.9</td>
<td>1.8 litres product/ha/crop</td>
<td>36 days before harvest.</td>
</tr>
</tbody>
</table>

Other Specific Restrictions:
To reduce the risk of resistance developing in target diseases the total number of applications of product containing Qol fungicides made to any cereal crop must not exceed two.

READ THE LABEL BEFORE USE. USING THIS PRODUCT IN A MANNER THAT IS INCONSISTENT WITH THE LABEL MAY BE AN OFFENCE. FOLLOW THE CODE OF PRACTICE FOR USING PLANT PROTECTION PRODUCTS.DIRECTIONS FOR USE

IMPORTANT: This information is approved as part of the Product Label. All instructions within this section must be carefully read in order to obtain safe and successful use of this product.

GENERAL INFORMATION
PRIORI XTRA is a suspension concentrate containing 200 g/l azoxystrobin and 80 g/l cyproconazole.

PRIORI XTRA contains both a triazole and a strobilurin fungicide. It has contact and systemic activity, with protectant properties for the control of a wide range of diseases in all commercial varieties of winter and spring wheat, winter and spring barley, winter and spring oats, rye and winter, spring oilseed rape, sugar beet and fodder beet.

DISEASES CONTROLLED

Wheat
Leaf Spot (*Septoria tritici*)
Glume Blotch (*Septoria nodorum*)
Yellow Rust (*Puccinia striiformis*)
Brown Rust (*Puccinia recondita*)
Eyespot (*Tapesia yallundae* and *Tapesia acuformis*) - useful reduction
Can reduce the severity of Take-all (*Gaeumannomyces graminis var. Tritici*)

When used to control other diseases, PRIORI XTRA will also control wheat powdery mildew.
Barley
Leaf Blotch (Rhynchosporium secalis) - moderate control
Net Blotch (Pyrenophora teres)
Powdery Mildew (Erysiphe graminis hordei)
Brown Rust (Puccinia hordei)
Eyespot (Tapesia yallundae and Tapesia acuformis) - useful reduction
Can reduce the severity of Take-all (Gaeumannomyces graminis var. Tritici)

Oats
Crown Rust (Puccinia coronata)
Powdery Mildew (Erysiphe graminis f.sp. avenae)

Rye
Brown Rust (Puccinia recondita)
Leaf Blotch (Rhynchosporium secalis) - moderate control
Powdery Mildew (Erysiphe graminis)

Oilseed rape
Dark Leaf and Pod Spot (Alternaria brassicae)
Sclerotinia stem rot (Sclerotinia sclerotiorum)

Sugar beet and fodder beet
Powdery mildew (Erysiphe betae)
Rust (Uromyces betae)
Ramularia leaf spot (Ramularia beticola)
Cercospora leaf spot (Cercospora beticola)

CROP SPECIFIC INFORMATION

WHEAT, BARLEY, OATS AND RYE

Spray timing
Treatment at early stages of disease development will ensure the best results. Apply at first sign of disease attack. A further application may be needed if disease attack is prolonged.

Take-all
When used to control the listed foliar diseases, PRIORI XTRA applied at the first or second node stage of the crop can reduce the severity of Take-all infection.

Rate of Use
1 litre per hectare

Resistance Management
Use PRIORI XTRA as part of an Integrated Crop Management (ICM) strategy incorporating other methods of control, including where appropriate other fungicides with a different mode of action. You must not apply more than two foliar applications of Qol containing products to any cereal crop.

PRIORI XTRA contains a DMI fungicide. Resistance to some DMI fungicides has been identified in Septoria leaf blotch (Mycosphaerella graminicola) which may seriously affect the performance of some products. For further advice on resistance management in DMIs contact your agronomist or specialist advisor, and visit the FRAG-UK website. Failure to follow resistance management action may result in reduced levels of disease control.
Strains of wheat and barley powdery mildew resistant to Qol's are common in the UK. Control of wheat powdery mildew can only be relied upon from the triazole component. Where specific control of wheat mildew is required this should be achieved through a programme of measures, including products with recommendations for control of mildew that contain different active substances used in mixture or sequence.

**OILSEED RAPE**

**Timing**
Before applying PRIORI XTRA, ensure the crop is free from any stress caused by environmental or agronomic effects. Best results will be achieved from applications made as a protectant treatment following a disease risk assessment or the use of appropriate decision support systems.

A second treatment may be required if disease pressure remains high.

*Sclerotinia* - PRIORI XTRA should be applied as a protectant spray during flowering. The optimum timing is early flowering to mid flowering (GS60 - GS65). A late application of PRIORI XTRA against *Sclerotinia* will also limit the development of *Alternaria*.

**Rate Of Use**
1 litre per hectare

**Resistance Management**
To avoid the likelihood of resistance developing, application of PRIORI XTRA should be made with due regard to current FRAG-UK guidelines for Qol compounds. Do not make more than two applications of PRIORI XTRA to crops of oilseed rape. Use PRIORI XTRA as part of an Integrated Crop Management (ICM) strategy.

**SUGAR BEET AND FODDER BEET**

**Timing**
Apply PRIORI XTRA at the first signs of the disease, before it becomes established. A single application of PRIORI XTRA may give adequate disease protection from re-infection, but a second application can be applied where crops are at risk from later attacks. Under sustained high risk of disease, care is required to ensure that the 2nd application is applied no later than the first sign of re-infection. Allow a minimum of 21 days between applications.

Applications of PRIORI XTRA can be made up to 36 days before harvest.

**Rate Of Use**
0.9 litre per hectare
Two applications may be made per crop.

**Resistance Management**
To avoid the likelihood of resistance developing, application of PRIORI XTRA should be made with due regard to current FRAG-UK guidelines for Qol compounds. Do not make more than two applications of PRIORI XTRA to crops of sugar and fodder beet. Use PRIORI XTRA as part of an Integrated Crop Management (ICM) strategy.

**MIXING AND SPRAYING**
Ensure that the sprayer is clean and correctly set to give an even application at the required volume. Half-fill the spray tank with clean water and start agitation. Shake the container and add the required...
amount of PRIORI XTRA to the sprayer using a filling device (e.g. induction bowl or closed transfer unit) or by direct addition to the sprayer tank.

Wash out containers thoroughly, preferably using an integrated pressure rinsing device, or manually rinse three times. Add washings to the sprayer at the time of filling. Complete filling to the required volume and continue to agitate throughout the spraying operation.

Do not leave the spray liquid in the sprayer for long periods (such as during meal breaks or overnight).

**VOLUME OF WATER AND SPRAYING**
Cereals and oilseed rape - Apply in a recommended 200 litres of water per hectare
Sugar beet and fodder beet - Apply in a recommended 200-400 litres of water per hectare

Use a medium quality spray (BCPC) at a pressure of at least 2 bar. Apply through conventional crop spraying equipment.

**AFTER SPRAYING**
Thoroughly wash out sprayer according to the manufacturer’s guidelines and dispose of washings and clear containers according to DEFRA Code of Practice and local water authority guidelines.

**COMPANY ADVISORY INFORMATION**

**RESISTANCE MANAGEMENT**
PRIORI XTRA is a co-formulated mixture of the strobilurin azoxystrobin and triazole cyproconazole. PRIORI XTRA contains active ingredients within the SBI and QoI fungicide resistance groups. The two active ingredients possess different modes of action thus form part of a resistance management strategy.

PRIORI XTRA contains azoxystrobin a member of the QoI cross resistance group. PRIORI XTRA should be used preventatively and should not be relied on for its curative potential.

Disease control may be reduced if strains of other pathogens less sensitive to PRIORI XTRA develop.

Users should refer to current FRAG-UK guidelines for QoI compounds.

*Product registration number: MAPP 11518*

PRIORI XTRA is a suspension concentrate containing 200 g/l azoxystrobin and 80 g/l cyproconazole.

A broad-spectrum fungicide for wheat, barley, rye, oats, oilseed rape, sugar beet and fodder beet.
