**AXIAL TANK MIX LIST**

The following tank mixes have been tested for physical compatibility with AXIAL + ADIGOR at recommended rates of use and will mix in the sprayer tank. Syngenta UK Ltd will support 2 or 3-way tank mixes of AXIAL + ADIGOR with any of the fungicides, herbicides, insecticides, PGR’s or adjuvants listed. In addition, products highlighted have been tested for biological and physical compatibility. All other products listed have not been tested for crop safety or product performance, therefore use is at the user’s own risk. For further information on compatibilities, contact Syngenta UK Ltd on 0800 169 6058.

TRACE ELEMENTS

Syngenta UK Ltd will support the tank mixing of any of the named trace elements with an existing 2 or 3-way tank mix including AXIAL. Syngenta UK Ltd advise that the trace element part of the tank mix is added to the sprayer tank last with constant agitation and the mixture is sprayed without delay.

### Headland Boron
- Nutrel SMART MagiK Manganese**
- Yara Vita Magflo

### Headland Copper
- Nutrel SMART Manganese**
- Yara Vita Magphos K

### Headland Jett
- Nutrel Master Manganese Plus**
- Yara Vita Mancozin

### Headland Manganese 15%
- Nutrel Master Magnesium + TE**
- Yara Vita Mancuflo

### Headland Stag
- Nutrel SMART ATS**

### Headland Sulphur
- Yara Vita Bortrac
- Yara Vita Mantrac 500

### Headland Super 80
- Yara Vita Coptrel 500
- Yara Vita Safe-N

### Headland Zinc
- Yara Vita Croplift
- Yara Vita Stopit

### Libspray 211
- Yara Vita Foliar Potash
- Yara Vita Sulphur F3000

### Nutrel Maxman 400**
- Yara Vita Liquid Manganese
- Yara Vita Zintrac

NOTES

**ADJUVANT:** Always use AXIAL with ADIGOR @ 0.5% spray volume, however this may increase to a maximum concentration of 1% of the spray volume where water volumes lower than 200 litres/ha are used.

Before using any tank mixture, consult and comply with the recommendations of the partner products. Each product should be added separately to the bulk of the water in the spray tank and thoroughly mixed before adding the next chemical. Always use constant agitation of the sprayer tank during mixing, transportation and application. Spray immediately.

1. Continuous agitation required
2. Ally Max SX = can read across to all DuPont SUs.
3. Supported by Dow. For further information contact Dow.

*DO NOT MIX ON SPRING BARLEY*

** All Nutrel trace elements are tested/supported by Nutrel.

TANK MIXING WITH HORMONE HERBICIDES

- **DO NOT** use hormone-containing herbicides in mixture with AXIAL.
- Hormone herbicides may be used in sequence with AXIAL, observing the following intervals:
  - When AXIAL is applied first, leave a minimum of 7 days before applying hormone herbicides
  - If hormone-containing products are applied first, leave 21 days before AXIAL is applied

TANK MIXING WITH SULFONYL-UREAS and other ALS inhibitor herbicides

- Tank mixes with some broad-leaved weed specific sulfonyl-urea herbicides can reduce grass weed control, particularly if AXIAL is applied at reduced rates.
- Only sulfonyl-urea herbicides listed above may be tank mixed with AXIAL.
- DO NOT MIX AXIAL with SU’s when targeting black-grass in barley.
- Sulfonyl-urea herbicides should only be tank mixed with AXIAL when AXIAL is used at the **full label dose rate** for the target weed (refer to label)
- When targeting wild oats or rye-grass using supported rates of AXIAL, in sequence with SUs (or other ALS inhibitors such as florasulam), observe the intervals indicated above for hormone herbicides.
- AXIAL is INCOMPATIBLE with Attribut, Monitor, PRAIRIE and any product containing carfentrazone.

LERAP: None
Rainfastness: 1 hour
Use plant protection products safely. Always read the label
and product information before use.
